

CITY OF SPRINGFIELD
INTER-OFFICE MEMORANDUM

ATTENTION OF MEMO TO FILE

DATE February 11, 1980

DEPARTMENT

On Wednesday, February 6, 1980, Steve Short and I wen to Krafcor on 2741 South Scenic to put in a waste water sampler. When we got there, we discovered that their sewer line was clogged up and there had been a motor oil spill near the septic tank area. We talked to Cecil Slavings, and he apparently knew nothing about the spill. They said that the oil from the machines inside was going to the septic tank and that Adam's Septic Tank service pumped the solids and the oil out of the tank periodically. Mr. Slavings was advised that disposing of oil in this manner was a violation of Federal, State and Local Water Pollution ordinances and to report the spill to the Missouri Department of Natural Resources. We suggested that he pump the oil into drums and contact a waste hauler to collect it.

Springfield, Missouri 65807

Dear Mr. Detjen:

On February 6, 1980, Steve Short and myself discovered an apparent motor oil spill near the septic tank on your parking lot. We spoke to Cecil Slavings and advised him that disposal of oil in this manner is in violation of the City, State and Federal Water Pollution Control ordinance and to report the spill to the Missouri Department of Natural Resources. We suggested that the oil be stored in 55 gallon drums and sold to a waste oil hauler. At this time there is a waste oil hauler in the Springfield area which will not only transport the oil from your property but will also pay yourfor it.

In this time when oil is such a precious commodity why not recycle.

Yours truly,

Karen A. Chandler

Springfield, MO 65804

Dear Mr. Detjen:

I am in receipt of a letter to David Duffield, Revenue Technician, requesting information as to how water used in your boiler and adhesive-making process can be deducted from your basis for sewer service charges.

To obtain such a deduction would require your supplying this office with substantial evidence indicating what quantities of water used do not enter the sanitary sewer. This evidence should include a diagram of piping, equipment, processes, etc., to substantiate the net loss. This office may require the installation and maintenance of one or more approved meters so as to determine the net quantities of water used in the boiler and adhesive-making process. Your proposal would be reviewed by this office and an on-site inspection would be required.

If you need additional information please do not hesitate to call.

Yours truly,

J. Randall Lyman
Water Pollution Control Inspector III
Surveillance & Enforcement
